

but you're
NOT immune.

- > Nine out of 10 computers are infected with viruses, worms, Trojan horses or other digital invaders.
- > Eight out of 10 have been imbedded with snooping programs.
- > It takes just 15 minutes for a brand-new computer to be "discovered" by hackers once you've logged onto the internet.
- > Nearly three in five computer owners will experience hardware or software problems within the first three months of ownership.
- > Two in five computer users who experience a computer crash will miss a deadline. A third will be forced to stay late at work.
- > One-third of workers spend 30 minutes per day helping others with IT problems.
- > When confronted with technical problems, more than 40 percent of users swear at, kick or otherwise abuse their computers.

Your day will come.

Reacting to a computer problem is at best a temporary fix:

- > Technicians can't go back in time to see what caused the problem.
- > Monitoring services may warn you that you're about to crash, but there is nothing they can do to actually prevent the crash.
- > Help Desks redirect you from one potential cause to another, in an endless cycle of blame.

MONITOR

PretechtSM Never Sleeps

It scans and monitors your computer systems 24 hours a day, seven days a week, capturing snapshots* every five to 15 minutes.

*Confidentiality assurance: Pretecht's scans do not look inside your documents, but rather at the systems that hold your data.

PREDICT

Systems don't spontaneously crash.

Long before they crash, something gets triggered that slowly, imperceptibly weakens the system. Pretecht trends data points to identify these triggers before they become problems.

PREVENT

Invisible threats can't hide from preventative thresholds.

Pretecht sends out a Systems Alert to our operations center when key threshold parameters have been breached.

Problems never wait.

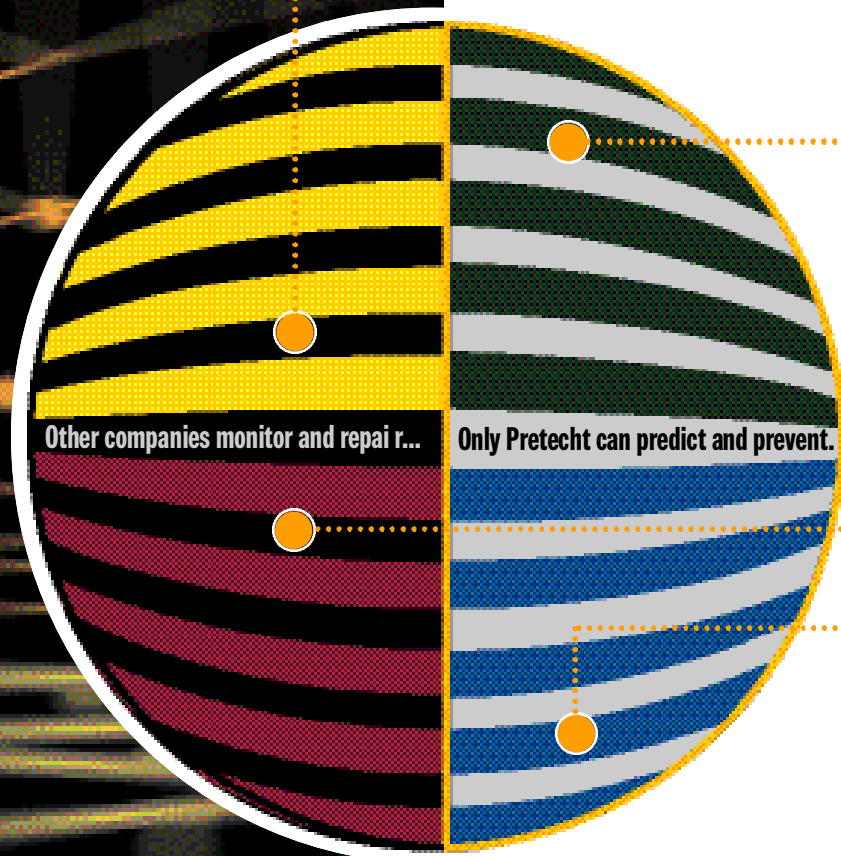

In most cases, Pretecht takes action remotely to keep your system running smoothly — without a blip in productivity. When on-site service is necessary, we'll dispatch a technician immediately, before you even sense that something might be wrong.

REPAIR

See for yourself!

Log in day or night to keep tabs on the status of your computer systems. Pretecht will provide you with Web-based client access to monitor the health of your systems as well as our actions.

PEACE OF MIND

PRETECHT YOUR BUSINESS. PRETECHT YOUR ASSETS. PRETECHT YOUR PEACE OF MIND.
